

A Study Of Self Concept Among High School Students

Bairister Yadav

The present study was conducted on a sample of 200 students. Among them 100 students were Brahmin and 100 students were Vaishya. All students were from rural and urban areas. The Rosen Berg Self- Esteem Scale was used to measure the level of self – esteem among the students which was developed by Rosen Berg in 1965. The main findings of this study were that community and residential play an important role in developing the attitude towards self concept. Brahmin students were having more favourable attitude towards self concept as compare to Vaishya students and on the other hand urban students hold more favourable attitude towards self concept as compare to rural students.
