

A Socio-Scientific Studies of Kala-azar in Bochan, Paru, Auri & Mushahari Blocks of Muzaffarpur District (Bihar)

Dr. Pushpa

In the present work the Kala-azar a very dangerous disease has been taken and on spot studies have been carried for ascertaining the conditions which are responsible for the our break of the disease. In this way the socio-scientific studies have been done. Today the WHO as well as the Government of India are expending Millions of rupees for curing the disease only. Neither there is attempt to prevent the disease nor it has been tried to correlate the socio-economic conditions of the people and the spread of the disease. Who is suffering from the diseases under what conditions the people are living who are the prey of the sand fly the vector of the pathology. In the present studies, it has been tried to survey the status and socio-economic conditions for scientific data of the disease.
